Individual Contribution Report: Kenneth

Student Name: Kenneth

Project Title: Legal Demand Assistant

Role: Documentation and QA Specialist

Total Contribution Percentage: 20%

Description of Contributions

My primary focus was on the finalization and verification phases of the **Legal Demand Assistant** system. My key responsibilities included:

- **Report Compilation:** I consolidated the technical findings from the GEPA prompt optimization and QLoRA fine-tuning experiments into a cohesive final report.
 - **Documentation:** I maintained the project's technical documentation, ensuring that the system architecture—from the FastAPI backend to the Streamlit UI—was clearly defined for stakeholders.
 - **Demo Testing:** I conducted rigorous testing of the "4-config toggle" in the Streamlit interface to ensure that the switching between the Baseline, GEPA, and QLoRA models functioned correctly during live inference.
-

Percentage of Contribution

I contributed **20%** to the overall success of the project, focusing on the quality assurance and communication of our results.

AI Tools Used

During the development process, I utilized several AI tools to streamline documentation and testing:

- **Claude:** Used for summarizing complex evaluation logs from the results.md file into concise tables for the group report.
- **Cursor:** Assisted in identifying inconsistencies within the Streamlit code during demo testing, allowing for faster debugging of the model toggle feature.
- **Antigravity:** Employed for initial drafting of the technical documentation, which I then refined to match the project's specific legal domain requirements.
